WAToDo

A task tracking system to bring the AI community together

OVERVIEW

PROBLEM

RESEARCH

PROTOTYPE

This project aims to boost community engagement, particularly observed during my role as a program manager for Microsoft's internal AI Ambassador program. The app allows Ambassadors to keep track of business meetings and provide real-time sharing of success stories in order to drive AI evangelization.

The AI Ambassador program consists of **800+ ambassadors**, serving **90 countries** and driving **over 10 billion dollars** in quarterly revenue.

OVERVIEW

PROBLEM

RESEARCH

PROTOTYPE

From research and understanding of the reporting activities within the community, it is found that applications like Notes is commonly used to keep track of client conversations. People often share progress through email upon requests.

With a task tracking application on their mobile phone, users will not only be able to track work progress, but also to organize work based on priority, to capture visual reminders in real time, and to send email updates on click.

USER STORIES

As an ambassador, I want to be able to know what other ambassadors are working on, so that I can communicate with them when it is needed.

As an ambassador, I want to jot down work progress anywhere and anytime.

As an ambassador, I want to save time reporting to program managers.

As an ambassador who works with multiple clients, I want to be able to prioritize my work quickly.

IDEATION

User Need: Learn what others are doing
Suggested Feature: Community news feed page

User Need: Update anywhere and anytime
Suggested Feature: arbitrary file attachment

User Need: Save time composing emails
Suggested Feature: Task to email auto-conversion

User Need: Easy file management
Suggested Feature: audio/image files to text

WATodo, App.

ABOUT THE APP

All in one smart mobile assistant that learns your schedule and takes your productivity to the next level

- Flesh out the items on your list
- Prioritize with groups and filtering
- Accomplish way more than before

HIGH FIDELITY
